

1	Does Bandura's social learning theory explain why the MOOC (ie, Coursera) craze has died down?	live answered
2	Any tips on how to implement these concepts within current educational structures (ie isolated weekly conferences)?	live answered
3	Our ACGME requires that we have a certain number of residents present for our lectures to count for didactics but since learners are always in different phases of "knowledge inoculation and vaccination" then should most of our didactics be year specific; didactics for PGY1s, PGY2s, etc.	live answered
4	What do you see as the future of CME given the principles you have described in your talk?	live answered
5	How would you approach implementing these strategies in the pre-clinical curriculum?	live answered
6	How clinical reasoning skill can be translated in to the deliberate practice?	live answered
7	Looking back on your own journey of mastery and when you were a Medical Student, is there anything you would have changed when you think of the learning/revision methods you used to use?/if you had to choose a top tip for the Medical Students out there?	live answered

8	Is there any evidence that self-assessment is possible in the era of milestones?	live answered
9	Do you all have a similar trend in Canada of mid-level providers developing specialty tracks? How do we maintain the learning environment of our residency programmes when we have multiple learners of quite different backgrounds in the learning space?	live answered
10	How do you maintain engagement beyond attendance, and accountability of attendance in remote/virtual didactics in residency/medical school training?	live answered
11	As physician administrators begin to spend less time clinically their expertise deteriorates yet it is important that they maintain clinical involvement. How do you suggest that they address the inevitable loss of clinical expertise through continued learning.	live answered
12	Is there any work to integrate the concept of entrustable professional activities or mastery-based assessment in EM residency training? If so, how do you envision that will change the structure—even timespan—of residency training?	live answered
13	Anyone lose sound?	Sounds is working - please try to log back in
14	Any thought on the Japanese antiviral favipiravir?	A phase III clinical trial of favipiravir was just launched
15	Which is your actual suggested therapeutic option for the early moderately symptomatic COVID patient	live answered
16	Any thoughts re the Kawasaki-like illnesses in children?	live answered

17	Your thoughts on the limitations of using viral RNA shedding as a surrogate endpoint, and how to interpret the findings of trial that rely on this measure as an indication of efficacy?	live answered
24	Any thoughts on ARBs and ACE inhibitors?	Thanks for the question. Dr. Auwaerter may get to this question, but I will provide some info. So far, we do not have RCT data on several trials looking at stopping ACE or ARB in patients who are on them (there is a biological argument why these medications could increase susceptibility to COVID bc they increase expression of ACE2). At the same time, there are trials going on looking at starting COVID-infected patients on losartan because there are arguments why these medications could be helpful. One of these trials is being run through SIREN.
